

Tuberculosis can be Cured and Prevented!

Why do I need to know about TB?

TB is a significant health problem in many areas of the world, including some communities in Orange County. Learn more about the disease so you can take action to protect yourself, your family and the community. TB is preventable and curable.

What can a TB clinic do for me? Clinics offer the following services

- × Skin testing for TB
- × Medical evaluation for TB
- × Medications for TB infection
- × Diagnosis and care for TB disease
- × Chest x-rays and lab tests
- × Education and Social Services

TB treatment services can be provided without charge.

Who should get a TB test?

TB skin testing is recommended if...

- × You have been in close contact with a TB patient
- × You are having symptoms of TB
- × Your doctor refers you to the clinic
- × Your HIV test is positive
- × You need a test for school or work*

*There might be charges for tests for school or work. Call for info.

Think TB!! If you have symptoms... get tested! It's free!

What are symptoms of TB?

Prolonged cough
Weight loss, fatigue
Night sweats
Loss of appetite
Fever, chills
Difficulty breathing
Shortness of breath
Coughing up blood

What is the treatment?

Persons with positive TB skin tests get chest X-rays and may get medications for TB infection which will prevent later disease.

Persons with active TB disease receive medical treatment and medications to make them non-infectious and to cure their disease.

Need more TB Information?

Educational fact sheets, posters and videos are available in many languages. Schools, businesses, and other agencies can request speakers or materials and assistance for community health fairs.
